**TSB-180**  
**Braided Heavy Duty Replacement Clutch Line**

This braided clutch line is a replacement line from the master to the slave cylinder on vehicles utilising the factory dampening valve. By eliminating the factory dampening valve, a more direct pedal feel will be achieved.

The factory hard lines and dampening valve will be completely removed from the firewall and the new braided clutch line will run from the master cylinder to the slave cylinder. The braided clutch line can then be neatly tied along the firewall using cable ties or the factory clips.

Dampening Valve

New Replacement Braided Line
